

# Lawn Care 1-2-3 +

## Spring

### After the last frost

1. SoilSyrup to replenish nutrients and beneficial micro-organisms depleted during the winter.
2. Lawn Honey to increase nutrient and water holding capacity. Prepares the soil for spring rains and fertilizer treatments.
3. Algoflash to fertilize your lawn and provide all essential nutrients
4. MegaGro to break dormancy of grass and landscape foliage.

### Planting warm weather grass seed

1. SoilSyrup for improved root growth of new grass.
2. Lawn Honey to hold seed and develop fuller grass.
3. MegaGro to increase seed germination rate.

## Summer

### Apply all summer for a beautiful green lawn, garden and ornamentals.

1. SoilSyrup every 4-6 weeks to maintain nutrient levels for healthy soil.
2. Lawn Honey every 4-6 weeks to reduce watering, prevent drought, reduce nutrient run-off. Use in trouble spots, such as shady areas, on hills, and reseeding.
3. Algoflash every 4-6 weeks to maintain nutrient levels
4. MegaGro , as needed, for improved growth of “problem” areas and brown patches.

## Fall

### Apply an end of season treatment to improve soil conditions

1. SoilSyrup to condition soil, break down clay soil, and increase nutrients for winter dormancy period.
2. Lawn Honey to maintain soil moisture at the root level throughout winter.
3. Algoflash to provide nutrients for healthy root growth

### Use when planting cool weather grass seed

1. SoilSyrup for improved root growth of new grass.
2. Lawn Honey to hold the seed and develop fuller grass.
3. Algoflash to provide nutrients for health root growth
4. MegaGro to increase seed germination rate.

<b>Lawn Care 1-2-3+ Application Rates - Apply Every 4-6 Weeks For Optimal Results</b>				
Lawn Size (sq ft)	Lawn Honey	SoilSyrup	Algoflash	MegaGro
1,000	2 oz.	2 oz.	4 oz.	2 oz.
2,500	4 oz.	4 oz.	8 oz.	4 oz.
5,000	8 oz.	8 oz.	16 oz.	8 oz.
10,000	16 oz.	16 oz.	32 oz.	16 oz.

## General Instructions

### Using our Lawn Care Hose-End Sprayers

Turn on water. Remove safety tab by bending off (it's the little tab on the top of the sprayer that keeps the dial from rotating). Turn the dial to "On" to apply. Walking at a slow even pace coat lawn in sweeping motions ranging 4 feet at a time. Cover your entire lawn. Rotate dial to "Water" and rinse lawn. Rotate dial to "Off" and you're done!

### Troubleshooting Your Hose-End Sprayer

If your SoilSyrup hose-end does not appear to be outputting, shake vigorously as the product may have settled. You can also dilute the SoilSyrup as needed to get it to output.

If your Lawn Honey hose-end does not appear to be outputting, make sure that water has not gotten into the hose-end bottle. You notice this if the Lawn Honey has become white and goeey. If this occurs clean the dip tube thoroughly and re-attach.

**NOTE:** Cleaning your Lawn Honey hose-end sprayer. As a water-absorbing polymer, Lawn Honey can be tricky to clean. DO NOT use water initially to clean the sprayer. Use an acidic solution like lemon juice, vinegar or even coffee to rinse the sprayer.

### Applying Lawn Care 1-2-3+ Products

Apply Lawn Honey first, to help prep the soil to retain water and nutrients. When using Lawn Honey Refill for the hose-end sprayer, simply add the concentrate to the sprayer and spray. Apply Lawn Honey at a rate of 2 oz. per 1,000 square feet every 4-6 weeks for optimal results

Apply SoilSyrup next to boost nutrients and condition the soil. When using SoilSyrup Concentrates to refill the hose-end sprayer, simply add the concentrate to the sprayer and spray. Apply SoilSyrup at a rate of 2 oz. per 1,000 square feet every 4-6 weeks for optimal results

Apply Algoflash next. If you've already applied Lawn Honey and SoilSyrup, you lawn will be fully prepped to get the most out of fertilizer treatments. This same sequence applies to any lawn fertilizer. Apply Algoflash at a rate of 4 oz. per 1,000 square feet every 4-6 weeks for optimal result.

Use MegaGro for trouble spots and new grass seed to boost growth and improve seed germination. MegaGro is NOT recommended for new sod. You'll want to wait a few weeks for the sod to establish itself before attempting to boost growth. Apply MegaGro at a rate of 2 oz. per 1,000 square feet as needed to boost growth or improve grass seed germination.

### Using Algoflash with a Hose-End Sprayer

**MIXING INSTRUCTIONS:** Pour concentrated Algoflash into an empty hose-end sprayer bottle. Use 4 oz. of Algoflash per 1,000 square feet. Thoroughly coat lawn area with solution and rinse with water.
